# Na **AND** Cs update

Yichao Yu

Ni Group/Harvard

November 4, 2016

# Load Na and Cs at the same time

## Overlap Na and Cs MOT

- Retro beam collimation
- Align the MOT beams using the MOT itself

# Load Na and Cs at the same time

## Overlap Na and Cs MOT

- Retro beam collimation
- Align the MOT beams using the MOT itself

# Load Na and Cs at the same time

## Overlap Na and Cs MOT

- Retro beam collimation  
**Expand** retro beam by 5 ~ 20%
- Align the MOT beams using the MOT itself

## Load Na and Cs at the same time

### Overlap Na and Cs MOT

- Retro beam collimation  
**Expand** retro beam by  $5 \sim 20\%$
- Align the MOT beams using the MOT itself

# Load Na and Cs at the same time

## Overlap Na and Cs MOT

- Retro beam collimation  
**Expand** retro beam by  $5 \sim 20\%$
- Align the MOT beams using the MOT itself

## Result

- Na AND Cs MOT at the same B field.
- 50% Na loading rate.
- $< 1$  second Na loading time.
- Na live loading.

# Load Na and Cs at the same time

## Overlap Na and Cs MOT

- Retro beam collimation  
**Expand** retro beam by  $5 \sim 20\%$
- Align the MOT beams using the MOT itself

## Result

- Na AND Cs MOT at the same B field.
- 50% Na loading rate.
- $< 1$  second Na loading time.
- Na live loading.

# Load Na and Cs at the same time

## Overlap Na and Cs MOT

- Retro beam collimation  
**Expand** retro beam by  $5 \sim 20\%$
- Align the MOT beams using the MOT itself

## Result

- Na AND Cs MOT at the same B field.
- 50% Na loading rate.
- $< 1$  second Na loading time.
- Na live loading.

# Load Na and Cs at the same time

## Overlap Na and Cs MOT

- Retro beam collimation  
**Expand** retro beam by  $5 \sim 20\%$
- Align the MOT beams using the MOT itself

## Result

- Na AND Cs MOT at the same B field.
- 50% Na loading rate.
- $< 1$  second Na loading time.
- Na live loading.

# Load Na and Cs at the same time

## Overlap Na and Cs MOT

- Retro beam collimation  
**Expand** retro beam by  $5 \sim 20\%$
- Align the MOT beams using the MOT itself

## Result

- Na AND Cs MOT at the same B field.
- 50% Na loading rate.
- $< 1$  second Na loading time.
- Na live loading.

# Load Na and Cs at the same time

## Load single atoms at the same time

- Separate trap beams

## Load Na and Cs at the same time

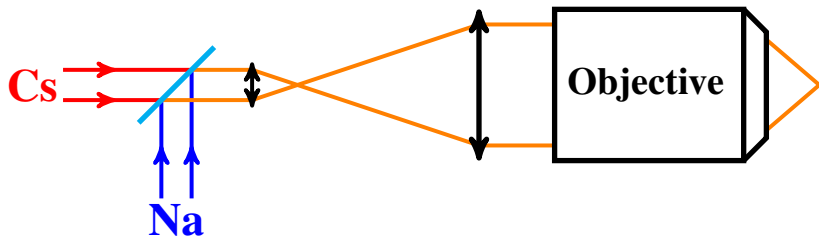

### Load single atoms at the same time

- Separate trap beams

## Load Na and Cs at the same time

### Load single atoms at the same time

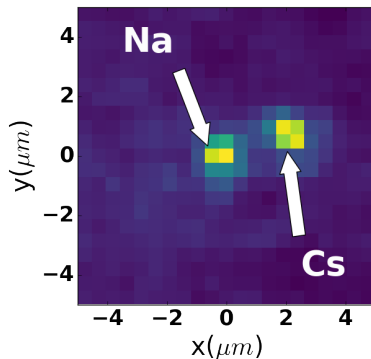

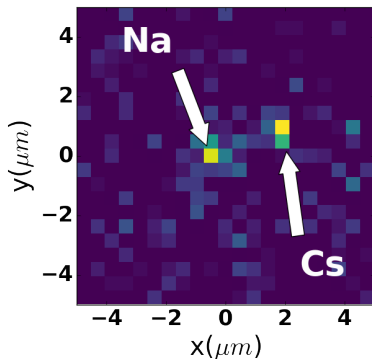

- Separate trap beams

## Load Na and Cs at the same time

### Load single atoms at the same time

- Separate trap beams

## Other Na improvements

- Temperature stability
- Optimize molasses cooling
- Optimize optical pumping

## Other Na improvements

- Temperature stability
- Optimize molasses cooling
- Optimize optical pumping

## Other Na improvements

- Temperature stability
- Optimize molasses cooling
- Optimize optical pumping

## Other Na improvements

- Temperature stability
- Optimize molasses cooling
- Optimize optical pumping
