- (if turn off) Turn off and unplug from wall

### Turn on check list

- (if turn off) Plug into the wall and turn on the power supply Do NOT do this with loads pluged in
- (if turn off) Plug the load back in

## • Novatec for 1.5 Cs lock [15] Lv1 above 1.5 Cs

### Turn off check list

– Save settings

#### Turn on check list

- Restore settings

### • High voltage power [17]

Lv1 next to 2 benchtop power

Follow function generator for 1.0 MOT piezo [18].

# Function generator for 1.0 MOT piezo [18]

Turn on-off together with the HV amplifiers for 1.0 piezo mirrors above and the high voltage power supply on the left

Turn off check list

- Turn off the function generator
- Unplug function generator output (zip tie and label)
- Unplug HV power supply from the wall

#### Turn on check list

- Plugin HV power supply to the wall
- Plugin function generator output
- Turn on the function generator

# • Temperature and pump controllers for cavity [19] Lv1 next to function generator

Check plugged into UPS.

## • Power (for Na uWave) [20] Lv1 next to uWave breadboard

Unused.

## • SAES pump [21] Lv1 above 1.0 chamber

Check plugged into UPS.

### 3 Table

## • PLL for 1.5 Cs MOT [22] Table near 1.5 Cs MOT

### Turn off check list

- Unplug all signals (zip tie together)
- Unplug 15V and 5V powers (zip tie together)

### Turn on check list

- Plugin 15V and 5V powers
- Plugin all signals
- Apply settings

### 4 Floor

## • Controllers for TiSapph (Mercury) [23]

Floor northwest corner Record settings,

Pump power	
Chiller temperature	

### Turn off check list

- Standby pump
- Pump off, shutter close, unplug from wall
- Turn off SolsTis controller (Lv1 facing KRb), unplug from wall
- Turn off Chiller, unplug from wall

- Turn on chiller, restore setting.
- Turn on SolsTis controller.
- Check wavelength setting (700 nm)
- Pump controller on, pump standby.
- Pump shutter open. Pump set to original power.

## • Controllers for TiSapph (Venus) [24]

Floor southwest corner

Record settings,

Chiller temperature	
Pump power setpoint	
Pump power reading	
Wavelength setting	

### Turn off check list

- Pump power set to 0, shutter close.
- Pump cool down (takes a long time)
- Pump off, unplug from wall
- Turn off SolsTis controller, unplug from wall
- Turn off Chiller, unplug from wall

### Turn on check list

- Turn on chiller, restore setting.
- Turn on SolsTis controller.
- Check wavelength setting
- Pump controller on, pump warm up (takes a long time).
- Pump set to original power.

Turn off.

### Jessie

For shutting off, go through the checklist before turning off the computers.

- Turn off equipments
- Turn off computers

Wait before everyone else finish their equipment shutoff before turning off the computers. For powering up, first turn the computers on before turning on the equipments.

- Turn on computers
- Turn on equipments
- Check computer connection to devices

Also wait before everyone else finish their corresponding steps before starting the next one.

### Record settings before turning things off.

All the lasers should be turned off.

All the home built power supplies should be on UPS.

All locks should be disabled.

All temperature controllers should be on UPS and left on.

For each equipment, check the power and make sure if is/should be on UPS. Make sure the "On UPS" label is correct.

### Equipments are mostly located around machine table facing KRb.

### Equipment list

ID	Equipment	Location			
	Machine table facing KRb top $\rightarrow$ down, north side				
1	Highest (voltage) power in the lab	Zip tied to you know where it is			
2	Benchtop power 1 Chn	Lv2 northwest corner facing KRb			
3	Home power $(\pm 15,5)$	Lv2 above 1.5 Cs Raman			
4	Benchtop power 1 Chn (x2)	Lv2 on home power $(\pm 15,5)$

• High voltage power [5]
Lv2 between home power (±15,5) and FPGA box

### • FPGA box for 1.5 [6]

### Lv2

Save 3.5 GHz amplitude

mplitude	Amp
----------	-----

### Turn off check list

- Save 3.5 GHz amplitude.
- (Do following three steps quickly)
- Turn off the box by flipping the switch on the front side of the box
- Unplug the high voltage (48V) power supply (circular plug) on the left side of the box. Then unplug the power supply itself fromm the outlet.
- Unplug the 12V board power supply. (L.T.E. one with a rectangular connector in the front)
- Unplug USB power on the front side near the fan.
- Zip tie the three unpluged powers to the computer control box.

#### Turn on check list

- Set 3.5 GHz frequency and amplitude.
- (Remove power connection zip ties and) Plug in USB power supply.
- − (Do following three steps quickly)
- Plug in the 12V board power supply.
- Plug in high voltage power supply. The fans should start spinning.
- Turn on the power switch of the box.
